

WESTERN—HEMLOCK

SCIENTIFIC NAME: *Tsuga heterophylla*

DISTRIBUTION AND AVAILABILITY

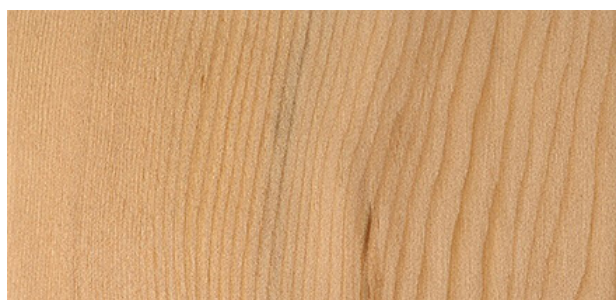

- Northwest coast of North America
- Readily Available

COLOR:

Range Variation

Heartwood is light reddish brown. Sapwood may be slightly lighter in color but usually isn't distinguished from the heartwood. Occasionally contains dark streaks caused by bark maggots. The conspicuous growth rings can exhibit interesting grain patterns on flatsawn surfaces.

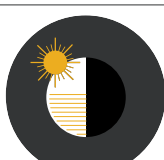

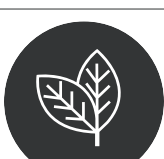

DISCLAIMER

A single sample may not accurately represent the full range of natural variations to be expected. Due to the inherent properties and characteristics of wood, these samples should be viewed as an approximation of what can be obtained. Some wood species have more natural variance in appearance than others. We have made every effort to make colors as accurate as possible. Colors on screen may vary depending on your screen setting and resolution.

LINEA

Species Overview

WESTERN HEMLOCK INFORMATION

AVERAGE DRIED WEIGHT		29 lbs/ft ³ (465 kg/m ³)
	GRAIN TEXTURE	The wood is generally straight-grained, fairly even in texture, and somewhat lustrous
	PRICING AVAILABILITY	Low to Moderate. Vertical Grain available at a premium. <i>Readily Available</i>
	COVERED EXTERIOR RATING	Poor Good Excellent
	PHOTOSENSITIVITY	High Moderate Low
	CONSERVATION STATUS	LC - Least Concern (IUCN 3.1)
	VENEER OPTIONS	Vertical Grain
